Our Team
Each school-based health center is staffed by medical professionals who have extensive experience caring for children of all ages. Our caring doctors, nurse practitioners, physician assistants, and other specialized professionals care for children at each location.

Parental Involvement
Parents and guardians are asked to sign a consent form before a student can go to the school-based health center. Once this consent is signed, the student may access the health center at any time during the school year.

We strongly support communication between parents, children and our clinic staff, and this is a principle goal of each of our health centers. We encourage students to discuss their health care with their parents.

Students in grades 6 - 12 are able to go to the clinic alone, but children in pre-school through fifth grade, must have a parent present with them.

Confidentiality
Student visits to the health center are confidential. Information is not shared without student and/or parental permission. The only exception is a life-threatening situation.

Cost and Insurance
There is no charge to the student or their family for medical services. Students will not have to pay co-pays, deductibles or fees to be seen. Insurance may be billed, but without cost to families.

Families are asked to provide health insurance information, so that we can bill for the services we provide whenever possible. Plus, if your child does not have health insurance, our staff has information about a number of programs that you may qualify for – which allows your child to be healthy year round.
